

Imports

The Imports screen includes the Imports tab, which allows users to upload a file from the computer or from the local server, select the correct format, and from different tools. The Student Match Files tab allows users to review student matches started and complete the process. The Student Match import tool is used to find student_ids for the students in an uploaded file. The Reports tab, which allows users to review a report of imports processed including date, time, import tool, file, etc. The Settings tab allows users to review and enable Import Tool Settings, review and set Conversion Fields, create and edit file mapping “Templates,” and view and create File Parsers.

-  The Imports screen replaces the following screens: Match Students - Admin Panel, Match Students - School Panel, AP Test Parser, Import Tools, and Importer. Note: There is a transition plan in place for these screen replacements. At this time, these screens have not been removed from Focus. Districts should contact their support team (Project Coordinator or Account Executive) for details on how to transition from the original screens to the new Imports screen.

Imports Profile Permissions

1. In the **Users** menu, click [Profiles](#).
2. Select **Menu** from the **Permission Type** pull-down.
3. Select **Admin** from the **Role** pull-down.
4. Select the applicable **Profiles** from the corresponding pull-down.
5. Click **Submit**.
6. Click the **Setup** tab.

Imports Navigation

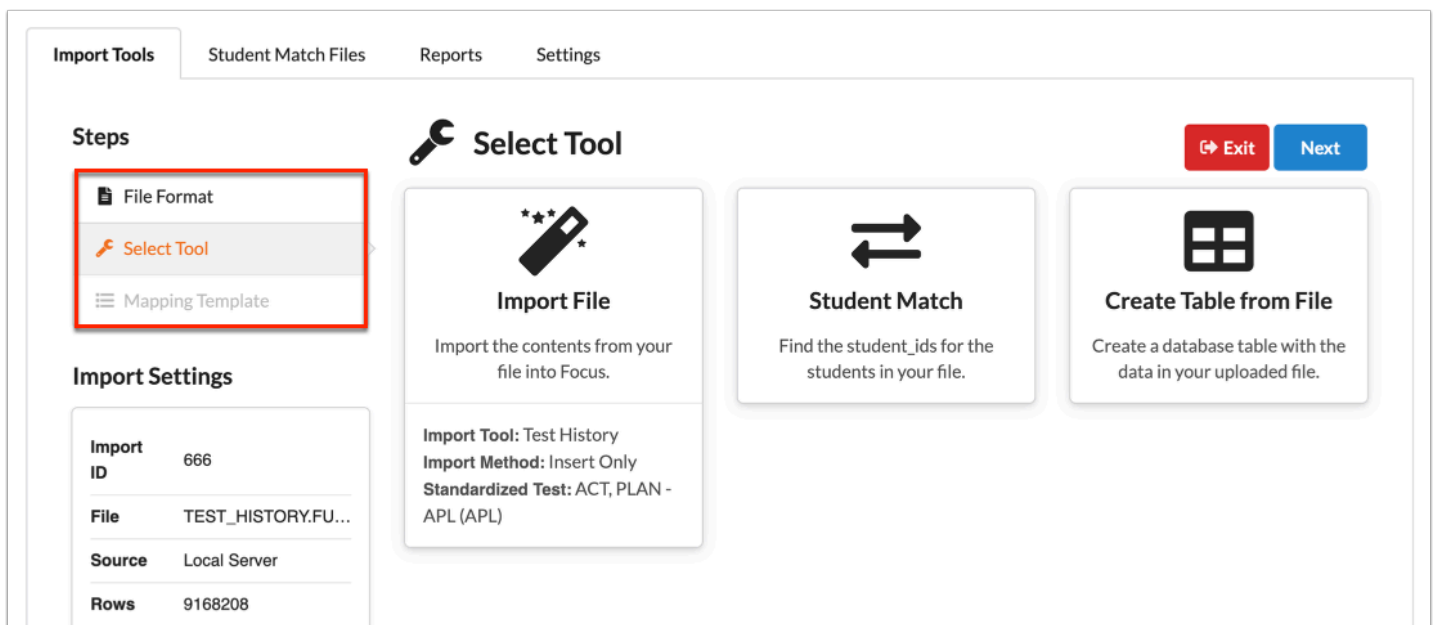

Click the **Import Tools** tab to import a file. From this tab you can find the following features:

- File Source
- Pending Imports
- Import Steps and Settings
- Import File, Student Match, and Create Table from File options

See [Import Tools \(Importing a File\)](#) for more details.

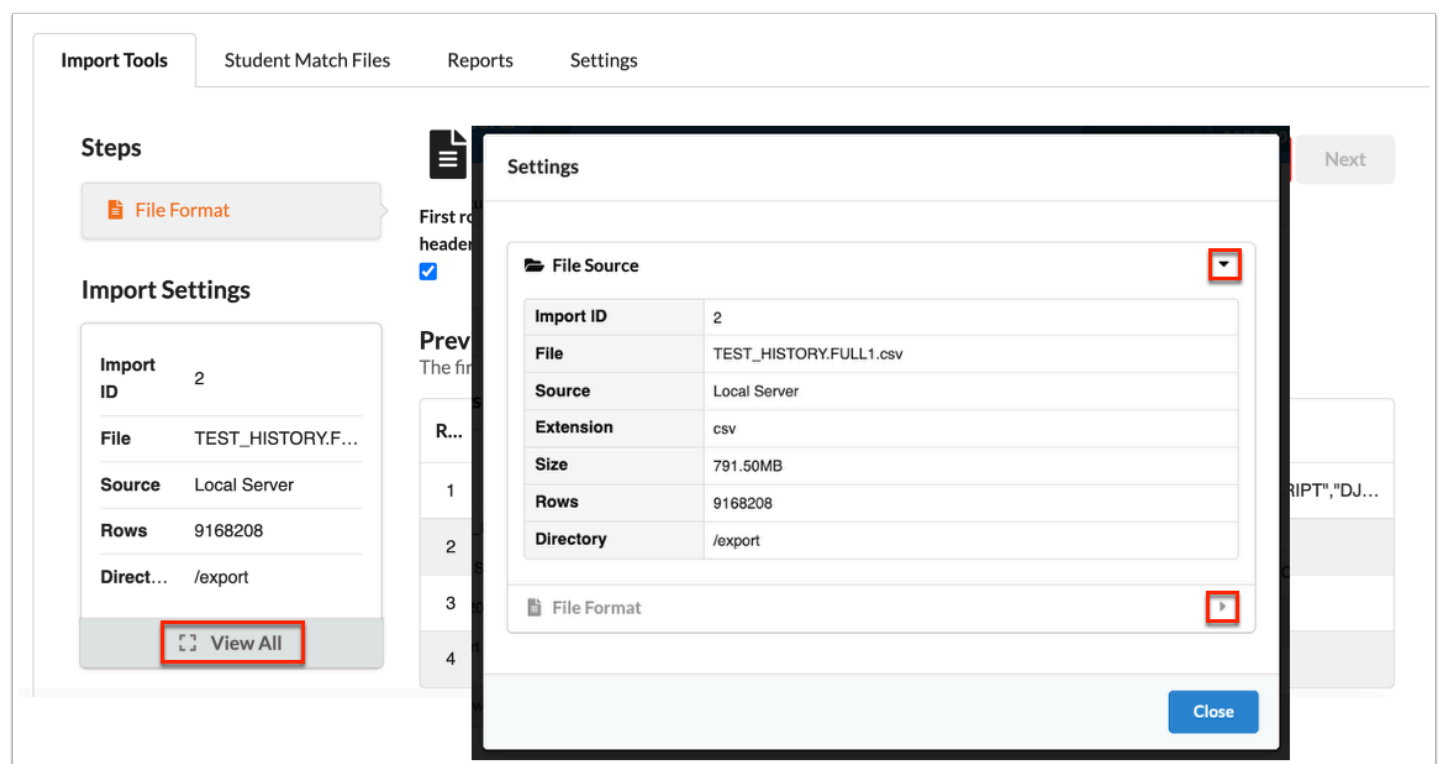

At any point during the import process on the Import Tools tab, click any of the applicable tabs in the **Steps** section to change or review information in a different step.

At any point during the import process on the Import Tools tab, you can review **Import Settings** which displays the Import ID, File, Source, Rows, Directory, etc. For additional information, click **View All**.

- a. Click the arrows to open and close headers containing information.
- b. Click **Close** once your review is complete to close the Settings pop-up window.

A **Preview** of the imported file is present during the File Format step during the import process on the Import Tools tab.

To display a Preview once this step is complete, click **View All** in the **Import Settings** section, as described above.

Comma Delimited: A type of data format in which each piece of data is separated by a comma; usually a CSV (Comma Separated Values) file. For example,

</>Name, School, Grade</>

Fixed Width: A type of fixed width text file that is arranged in rows and columns with one entry per row. Each column has a fixed width, specified in characters. No delimiters are used to separate the fields in the file.

Pipe Delimited (Single): A type of data format in which each piece of data is separated by a pipe: |. Usually a TXT file. For example,

```
</>Name | School | Grade</>
```

Tab Delimited: A type of data format in which rows are represented by the lines in the file and columns are created by separating the values on each line by a tab (long space character); usually a TXT file. For example,

```
</>Name      School      Grade</>
```

File Converter: Fixed Width to CSV

Selecting Fixed Width as the Format will convert an uploaded fixed-width file into a customized and downloadable CSV file.

1. Select **Fixed Width** from the **Format** pull-down.

The screenshot shows the 'Import Tools' interface with tabs for 'Student Match Files', 'Reports', and 'Settings'. The 'File Format' step is active, showing a 'Format' dropdown menu with 'Fixed Width' selected. A red box highlights the 'Fixed Width' option. To the right of the dropdown is a 'Field Positions' button. Below the dropdown is a 'Preview' section showing the first few rows of the file. The 'Import Settings' section on the left shows 'Import ID' 665 and 'File' FN.DX99.FTP.DA_2...

2. Click **Field Positions** to customize the column delimitation.

6	lep_info	<div>lep_info</div>	<div></div>

11. If you need to map a different field from the once automatically matched, click the **Override** toggle, then enter a new column value in the provided text box.

 Mapping Template

Exit

Validate

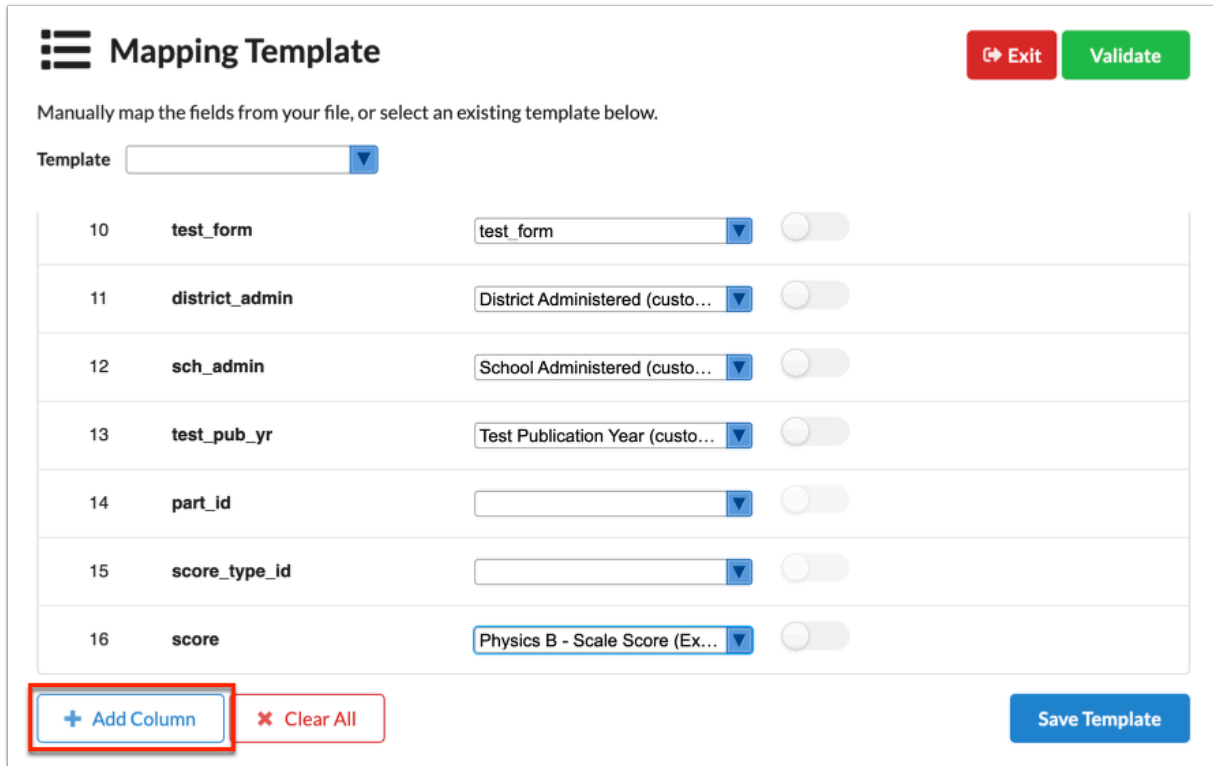

Manually map the fields from your file, or select an existing template below.

Template

Column Order	File Column	Mapped Field	Override
1	stu_id	<div>student_id</div>	<div></div>
2	test_id	<div></div>	<div></div>
3	administration_date	<div>administration_date</div>	<div><div></div><div>Enter a new column val</div></div>
4	syear	<div>syear</div>	<div></div>
5	gradelevel	<div>gradelevel</div>	<div></div>

 This override value replaces any value provided in the original import file for the selected column and for all records.

12. To default a value into a table column for a field that does not exist in the file, click **+ Add Column**.

The screenshot shows the 'Mapping Template' interface. At the top, there's a title 'Mapping Template' with a hamburger menu icon on the left and 'Exit' and 'Validate' buttons on the right. Below the title, a instruction says 'Manually map the fields from your file, or select an existing template below.' There's a 'Template' dropdown menu. The main area is a table with 6 rows, each representing a mapping. The columns are: an index (10-16), a source field name, a destination field name (selected from a dropdown), and an 'Override' toggle switch. The rows are: 10: test_form to test_form; 11: district_admin to District Administered (custo...; 12: sch_admin to School Administered (custo...; 13: test_pub_yr to Test Publication Year (custo...; 14: part_id to an empty dropdown; 15: score_type_id to an empty dropdown; 16: score to Physics B - Scale Score (Ex...). At the bottom, there are three buttons: '+ Add Column' (highlighted with a red box), 'Clear All', and 'Save Template'.

Index	Source Field	Destination Field	Override
10	test_form	test_form	<input type="checkbox"/>
11	district_admin	District Administered (custo...	<input type="checkbox"/>
12	sch_admin	School Administered (custo...	<input type="checkbox"/>
13	test_pub_yr	Test Publication Year (custo...	<input type="checkbox"/>
14	part_id		<input type="checkbox"/>
15	score_type_id		<input type="checkbox"/>
16	score	Physics B - Scale Score (Ex...	<input type="checkbox"/>

a. In the added row, select the destination table column from the **Mapped Field** pull-down. The **Override** toggle is automatically enabled. Enter the value that will default into the table column in the provided text box.

11	district_admin	District Administered (custo... ▼	<input type="checkbox"/>
12	sch_admin	School Administered (custo... ▼	<input type="checkbox"/>

Import Tools: Student Match

The Student Match import tool is used to find student_ids for the students in the uploaded file.

1. Follow the steps described in [Import Tools \(Importing a File\)](#).

2. Click **Student Match**.

The screenshot shows the 'Import Tools' interface with tabs for 'Import Tools', 'Student Match Files', 'Reports', and 'Settings'. The 'Import Tools' tab is active. On the left, under 'Steps', 'File Format' is selected. Below it, 'Import Settings' are listed: Import ID 2, File TEST_HISTORY.FUL..., Source Local Server, Rows 9168208, and Directory /export. A 'View All' link is at the bottom. The main area is titled 'Select Tool' and contains three options: 'Import File' (Import the contents from your file into Focus.), 'Student Match' (Find the student_ids for the students in your file.), and 'Create Table from File' (Create a database table with the data in your uploaded file.). The 'Student Match' option is highlighted with a red border. At the top right, there are 'Exit' and 'Next' buttons.

💡 Reminder: Student Match can run alongside an Import, such as Test History.

3. In the pop-up window, map the columns from your file to the required match columns. Select the applicable **File Column** from each pull-down for the Match Column.

Student Match

Map the columns from your file to the required match columns below, and select the date format of the birth date in the file.

Match Column	File Column	
First Name	<input type="text" value="first"/>	
Last Name	<input type="text" value="last"/>	
Birth Date	<input type="text" value="birthdate"/>	Format <input type="text" value="MM/DD/YYYY"/>
School	<input type="text" value="school"/>	<i>Optional: Set this value to allow access to unmatched students by School.</i>

☐

The listed standardized tests pulls from tests set up via Assessment > [Standardized Tests](#).

Scores Layout Description

There are currently three different options for importing test scores into Focus and the one that should be used will depend on how your source file is structured.

Standard

This type of file structure allows you to include a column for Test ID, Part ID, Score Type ID, and Score Value. There aren't any known providers that work with this structure but you may rearrange your file to this format as an alternative. You will have multiple rows for the same student and test administration.

Click the file/link below to download the THL Importer file layout.

[Test History Standard Layout.xlsx](#)

File header example:

```
|Student_ID|Admin_date|Test_ID|Part_ID|Score_type_ID|Score|
```

Score Types are split from Test Part columns

There's just one set of score columns but also one column for Test ID and one column for Test Part to identify the part those scores belong to for the test. You will have multiple rows for the same student and test administration. Score Types are split from Test Part columns.

This structure is also used in the Florida EOC tests, for example, but without a Test ID column, it needs to be run with method #1 described above.

File header example:

```
|Student_ID|Admin_date|Test_ID|Part_ID|Raw_Score|Scale_Score|National_perce
```

Test Part & Score Types are combined into one or more columns

In general, this is how third-party systems will generate their scores extracts. You'll have multiple sets of score columns where each set represents a specific test part. In this type of structure you won't have a column in the file with the Part Code ID. It should also have one record per student and test administration date.

Layouts are provided by the third-party system.

File header example:

```
|Student_ID|Admin_date|Eng-SS|Eng-RS|Eng-NP|Math-SS|Math-RS|Math-NP|Sci-SS|
```

Scores Layout Application

1. Following the steps described in [Import Tools: Import File](#), in the Import File pop-up window, select **Test History** from the **Import Tool** pull-down.
2. Select the **Scores Layout** from the provided pull-down. To determine the layout needed, see [Scores Layout Description](#).

Import File

Options

Import Tool

Test History

Import Method

Insert Only

Standardized Test

WIDA ACCESS for ELLs 2.0 (AFE)

Parse File

☐

Scores Layout

Test Part & Score Types are combined into ...

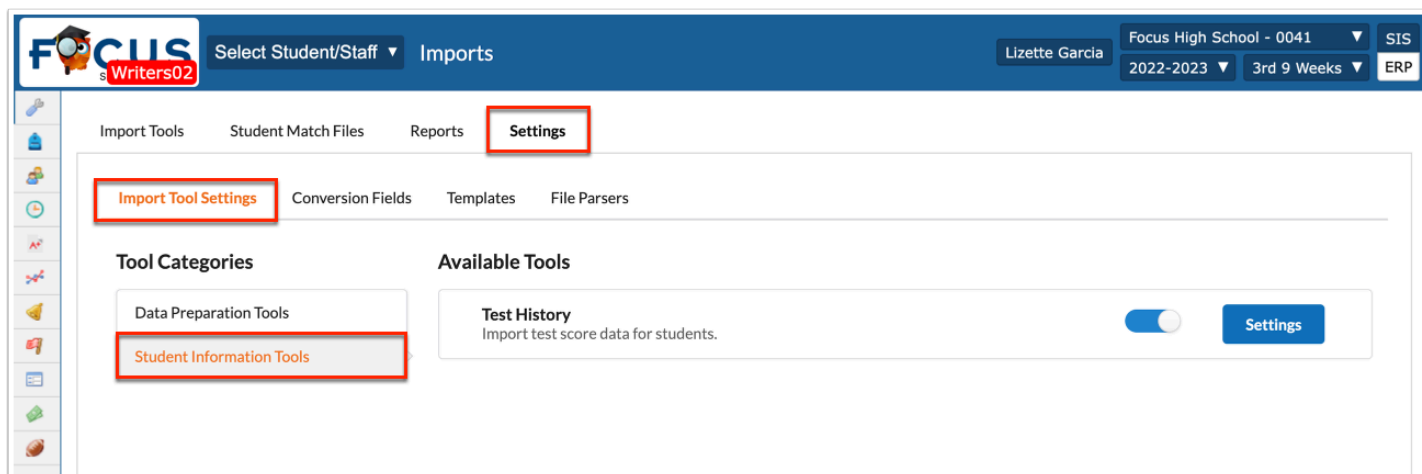

Import Specific Rows

☐

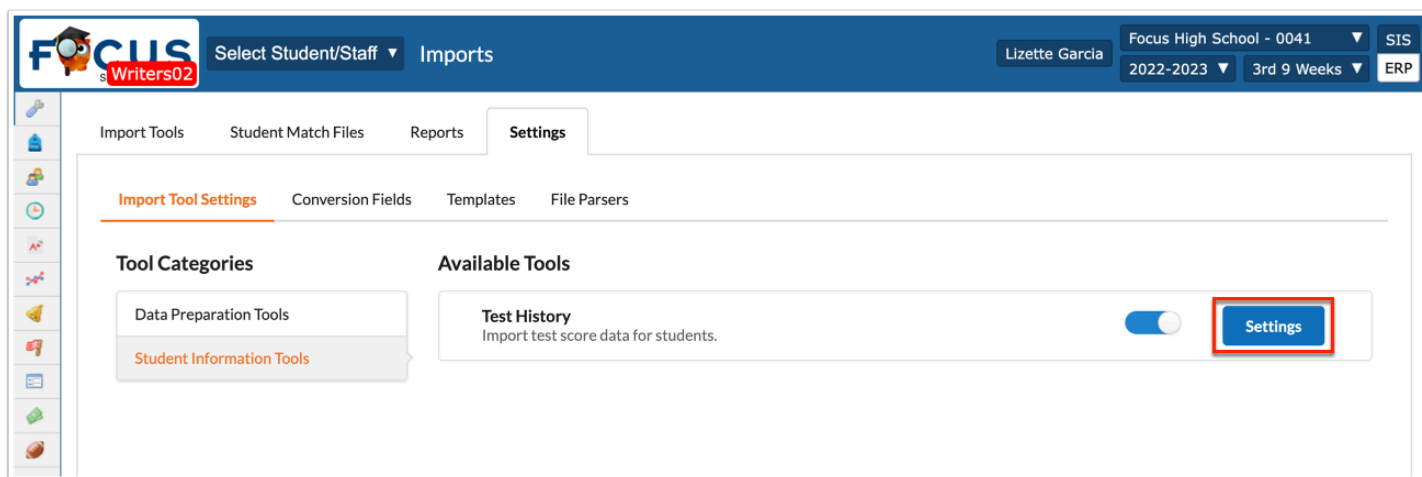

i Any score layout option can and should be selected depending on how the file is formatted. When a Standardized Test is not selected (field is left blank) only two options are available (Split and Standard); however, only when a test is selected will all 3 options become available. At which point, "Combined" is the default option, which can still be changed to a different option when needed.

Import Key Fields Setup

1. Import Keys can be reviewed and edited via Imports > [Settings](#) tab > [Import Tool Settings](#) tab > [Student Information Tools](#) tab.

2. Click **Settings** for Test History.

3. Focus' default import keys are selected by default. Click the provided pull-down for **test_history_administrators** and/or **test_history_scores** to change the selections made.

Test History

test_history_scores
administration_id, part_id, test_id ▼ 

Conversion Fields

Conversion Fields determine how the import process converts a value, such as the `part_id`: ENG to a value Focus can understand and place, such as 237. Therefore, if `subject_code` is selected as the default conversion field for `part_id`, Focus will know to convert the subject code into the part ID.

 Conversion Fields are set up via Imports > Settings > Conversion Fields. See [Conversion Fields](#) for more information.

The Default conversion fields are as follows:

For `part_id`, the default is `subject_code`.

For `student_id`, the default is `student_id`.

1. Following the steps described in [Import Tools: Import File](#), in the Import File pop-up window, select **Test History** from the **Import Tool** pull-down.

The Conversion Fields selected are either the Focus defaults or the selections made in setup as described in [Conversion Fields](#).

2. Click the provided pull-down for **part_id** and/or **student_id** to change the selections made.

Student Match Files

The Student Match Files tab allows users to review student matches started and complete the process. A Student Match import must first be conducted before users can view the process from this tab. The Student Match import tool is used to find student_ids for the students in an uploaded file.

i Only files where the Student Match process has been initiated as part of the Import steps in the Import Tools tab will display here. When an import has been completed, that Import ID will no longer be displayed in this tab.

- 1. Follow the steps described in [Import Tools \(Importing a File\)](#).
- 2. Follow the steps described in [Import Tools: Student Match](#).
- 3. Click the **Student Match Files** tab.

Settings

The Settings tab allows users to enable and review Import Tool Settings, review and set Conversion Fields, view, edit, and create Templates for mapping fields, and view and create new File Parsers.

1. In the **Setup** menu, click **Imports**.

2. Click the **Settings** tab.

The screenshot shows the Focus Writers02 application interface. At the top, there is a header bar with the Focus logo, a 'Select Student/Staff' dropdown, and the 'Imports' section. The 'Imports' section includes a user name 'Lizette Garcia', a school selection 'Focus High School - 0041', a term selection '2022-2023', a week selection '3rd 9 Weeks', and buttons for 'SIS' and 'ERP'. Below the header, there is a navigation bar with tabs: 'Import Tools', 'Student Match Files', 'Reports', and 'Settings'. The 'Settings' tab is highlighted with a red box. Under the 'Settings' tab, there are four sub-tabs: 'Import Tool Settings', 'Conversion Fields', 'Templates', and 'File Parsers'. The 'Import Tool Settings' sub-tab is selected. It contains two sections: 'Tool Categories' and 'Available Tools'. The 'Tool Categories' section has two options: 'Data Preparation Tools' (selected) and 'Student Information Tools'. The 'Available Tools' section lists four tools, each with a toggle switch and a 'Settings' button: 'File Converter (Fixed Width to CSV)', 'Create Table from File', 'Student Match', and 'File Parser'.

Choose from the following tabs:

[Import Tool Settings](#): The Import Tool Settings tab houses the Data Preparation Tools tab and the Student Information Tools tab, which allows users to enable and edit the following settings: File Converter (Fixed Width to CSV), Create Table From File, Student Match, File Parser, and Test History.

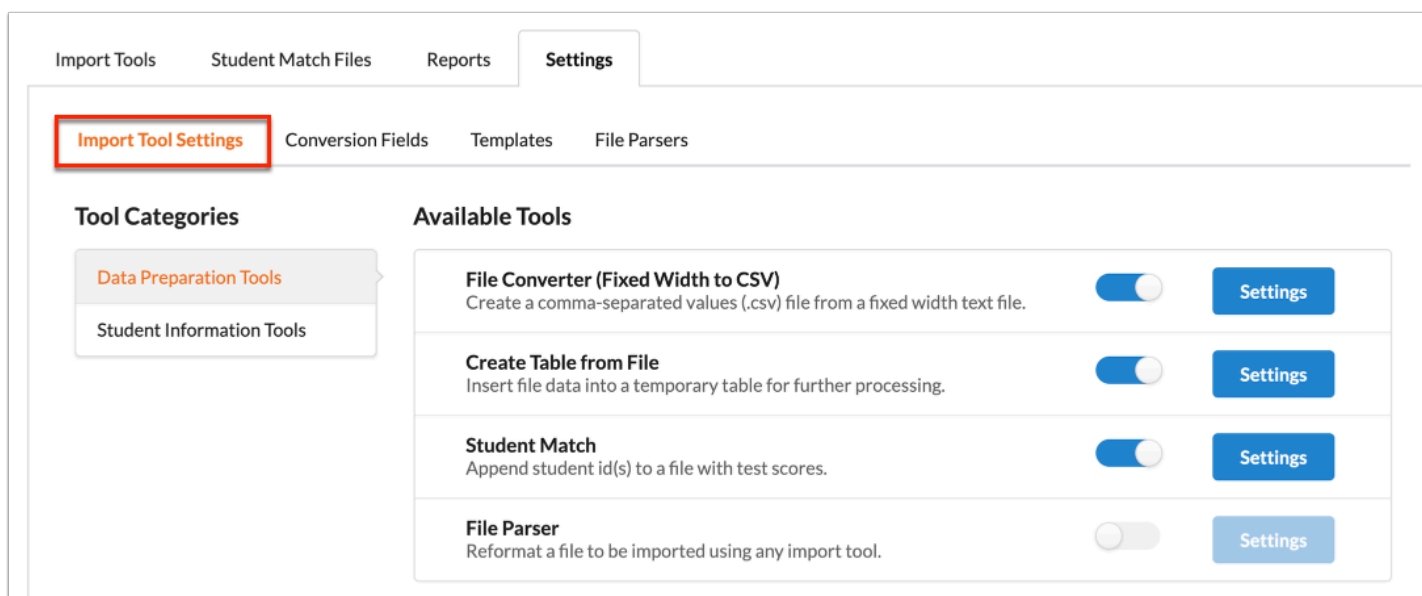

[Conversion Fields](#): The Conversion Fields tab allows users to determine the Identifier Column, Key Conversion Fields, the Import Tools for which the conversion applies, and whether the selections should act as a default.

[Templates](#): The Templates tab displays existing mapping templates that were created and saved or installed and allows users to edit existing templates or install new templates. Templates are used to automatically map out fields from an uploaded file.

[File Parsers](#): The File Parsers tab allow users to create new parsers by storing the necessary SQL code as well as edit SQL code for existing file parsers.

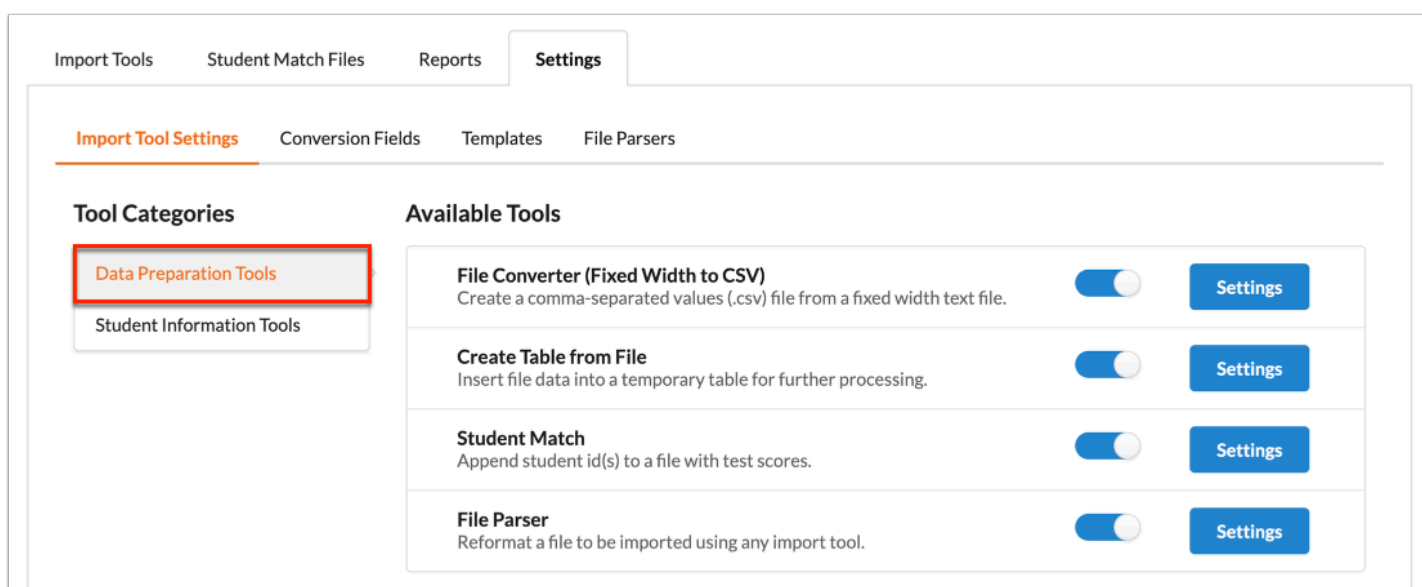

Import Tools Settings

The Settings tab defaults to the **Import Tool Settings** tab, which allows users to customize settings for import tools.

Data Preparation Tools

1. Click the **Data Preparation Tools** category to edit settings for the file converter, student match, file parser, etc.

2. Click the toggle to enable the **File Converter (Fixed Width to CSV)** setting to format fixed-width files during an import.

 See [File Converter: Fixed Width to CSV](#) for more details on this process once set up is complete.

a. Click **Settings** to view information about the directory and enable general settings.

iii. Click **Save** to apply changes.

Conversion Fields

Conversion Fields determine how the import process converts a value, such as the `part_id`: ENG to a value Focus can understand and place, such as 237. Therefore, if `subject_code` is selected as the default conversion field for `part_id`, Focus will know to convert the subject code into the part ID.

The Conversion Fields tab allows users to determine the Identifier Column, Key Conversion Fields, the Import Tools for which the conversion applies, and whether the selections should act as a default.

1. Click the **Conversion Fields** tab.

2. Select the **Conversion Field** from the provided pull-down

5. Click the **Title** text box to edit the template title.

The screenshot shows the 'Settings' tab with the 'Templates' sub-tab selected. On the left, the 'Manage Templates' section has a 'View All' button and an 'Install' button. The main 'Template Settings' area has a 'Title' field containing 'Test History Template', which is highlighted with a red box. To the right, the 'Linked Import Tool' is set to 'Test History'. Below this, there are fields for 'Linked Standardized Test' and 'Scores Layout', both with dropdown arrows. At the bottom, a table lists mapped fields:

Column Order	Mapped Field	Override	Delete
1	student_id	<input type="checkbox"/>	-
2	test_form	<input type="checkbox"/>	-

A 'Save' button is located in the top right corner.

6. You can select a **Linked Import Tool** from the pull-down if one has not already been assigned. For example, if you recently installed a template, it will not have a Linked Import Tool assigned to it.

This screenshot shows the 'Template Settings' page for a template titled 'ACT Test History'. A light blue warning banner at the top states: 'This template has not been assigned to an import tool. To edit mapped fields, please assign to an import tool above.' The 'Title' field contains 'ACT Test History'. The 'Linked Import Tool' dropdown is empty and highlighted with a red box. The 'Type' is set to 'Delimited'. A 'Save' button is in the top right. Below the warning, the same table structure as in the previous screenshot is visible but partially cut off.

7. Additional pull-downs may display depending in the Linked Import Tool selected upon creating the Template, such as Linked Standardized Test and Scores Layout for the Test History import tool. See [Import Tool Requirements](#) for information about each Import Tools and their requirements.

10				-
11	District Administered (custom_1)			-
12	School Administered (custom_2)			-
13	Test Publication Year (custom_3)			-

 Deleting a mapped field will move all other fields up. For example, if column 10 is deleted, column 11 and the mapped field now become column 10. If you have deleted a column and mapped field be mistake, do not Save the changes to the template.

Modifying the order of the columns can disrupt the import that uses the template. The template columns should always match the order of the file you are trying to import.

Title

Alternate Access for ELL

Linked Import Tool

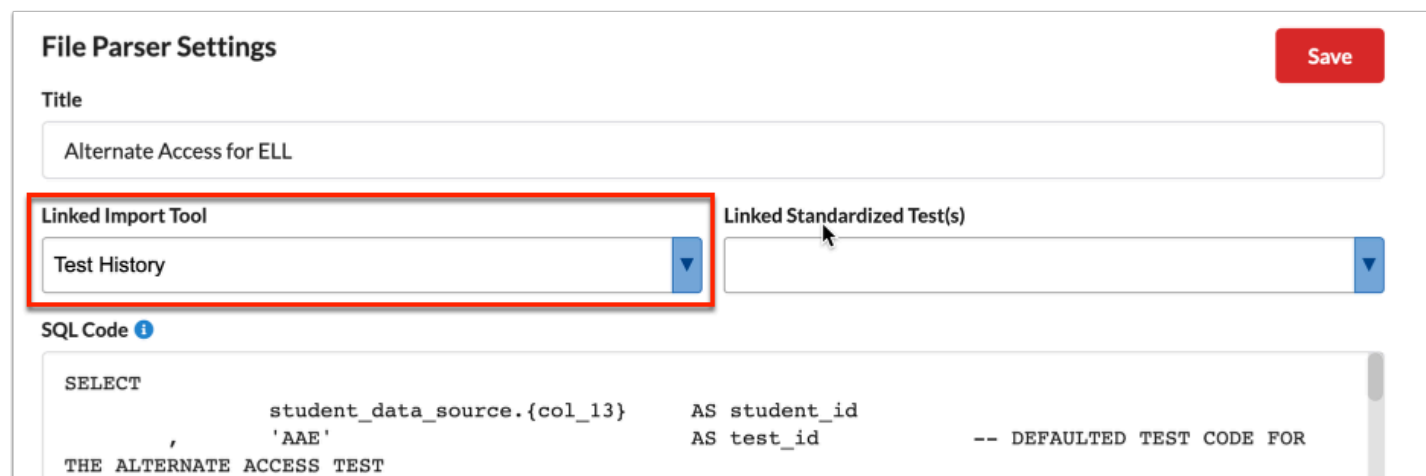

Test History

Linked Standardized Test(s)

SQL Code

```
SELECT
    student_data_source.{col_13} AS student_id
    , 'AAE' AS test_id
    , 'THE ALTERNATE ACCESS TEST' AS test_name
    , CONCAT(
```

6. Click the **Linked Import Tool** pull-down to change the selection made and apply a different import tool.

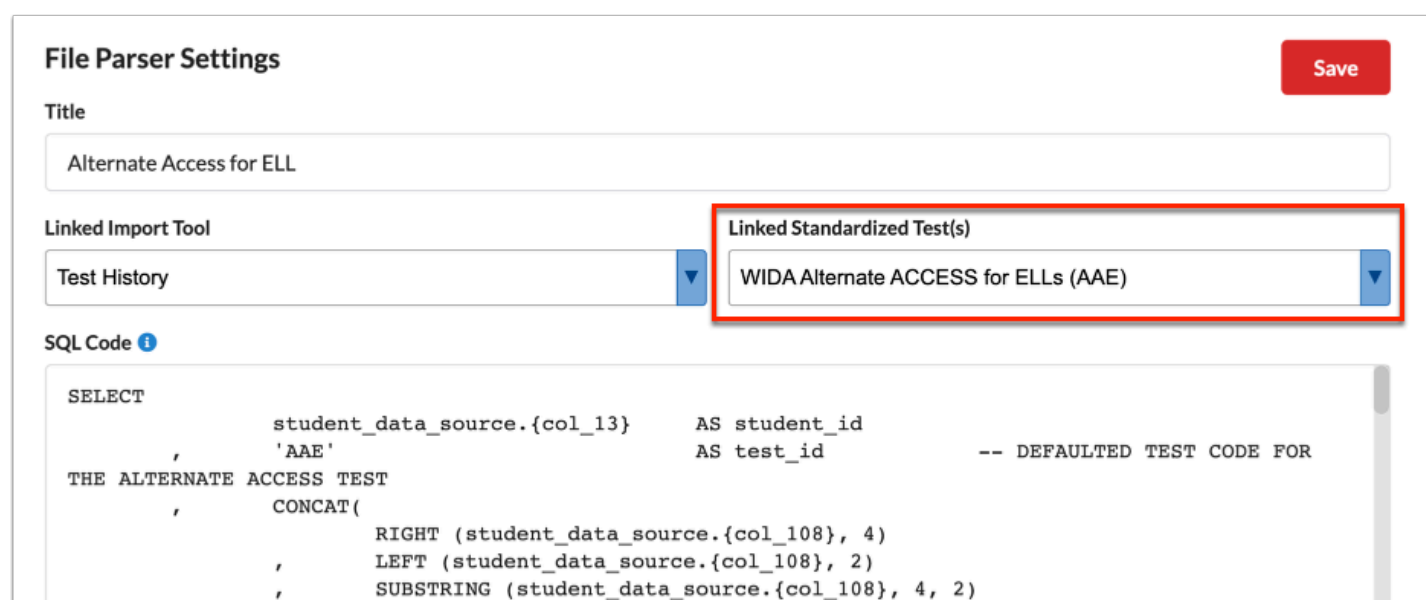

The screenshot shows the 'File Parser Settings' form. At the top right is a red 'Save' button. Below the title 'File Parser Settings' is a text field for 'Title' containing 'Alternate Access for ELL'. Below that are two dropdown menus: 'Linked Import Tool' and 'Linked Standardized Test(s)'. The 'Linked Import Tool' dropdown is highlighted with a red rectangular box and currently shows 'Test History'. Below these is a section for 'SQL Code' with an information icon. The SQL code is as follows:

```
SELECT
    student_data_source.{col_13} AS student_id
    , 'AAE' AS test_id -- DEFAULTED TEST CODE FOR
    THE ALTERNATE ACCESS TEST
```

7. Additional pull-downs may display depending in the Linked Import Tool selected, such as Linked Standardized Test for the Test History import tool. See [Import Tool Requirements](#) for information about each Import Tools and their requirements.

This is helpful when you have multiple test history file parsers as they can now be organized by the individual test. This feature filters the options available when selecting the settings for an import.

This screenshot shows the same 'File Parser Settings' form, but with the 'Linked Standardized Test(s)' dropdown highlighted by a red rectangular box. The 'Linked Import Tool' remains 'Test History'. The 'Linked Standardized Test(s)' dropdown now displays 'WIDA Alternate ACCESS for ELLs (AAE)'. The 'SQL Code' section has been updated with the following code:

```
SELECT
    student_data_source.{col_13} AS student_id
    , 'AAE' AS test_id -- DEFAULTED TEST CODE FOR
    THE ALTERNATE ACCESS TEST
    , CONCAT(
        RIGHT (student_data_source.{col_108}, 4)
        , LEFT (student_data_source.{col_108}, 2)
        , SUBSTRING (student_data_source.{col_108}, 4, 2)
```

8. Edit the **SQL Code**, as needed.

SQL Code

```
SELECT
    student_data_source.{col_13} AS student_id
    , 'AAE' AS test_id -- DEFAULTED TEST CODE FOR
THE ALTERNATE ACCESS TEST
    , CONCAT(
        RIGHT (student_data_source.{col_108}, 4)
        , LEFT (student_data_source.{col_108}, 2)
        , SUBSTRING (student_data_source.{col_108}, 4, 2)
    ) AS administration_date -- DATE REFORMATTED TO YYYYMMDD
    , NULL AS syer -- ELEMENT NOT AVAILABLE IN FILE
    , student_data_source.{col_15} AS gradelevel
    , NULL AS lep_info -- ELEMENT NOT AVAILABLE IN FILE
    , NULL AS transcript -- ELEMENT NOT AVAILABLE IN FILE
    , NULL AS dii_info -- ELEMENT NOT AVAILABLE IN FILE
    , NULL AS test_level -- ELEMENT NOT AVAILABLE IN FILE
    , student_data_source.{col_59} AS test_form
    , student_data_source.{col_5} AS custom_1 -- district administered
    , student_data_source.{col_7} AS custom_2 -- school administered
    , NULL AS custom_3 -- test pub year -- ELEMENT NOT
```

9. Edit or enter **Notes** in the provided text box, as needed.

Notes

```
AUTHOR          : FOCUS
TITLE           : "ALTERNATE ACCESS FOR ELLs (AAE)"
TEST CODE       : "AAE"

Creating New File Parsers

The File Parsers tab allows users to create new file parsers, which contains the ability to set up a new file parser and insert copied SQL code from an existing file parser. Once the parser is created and SQL data is posted, users can edit and modify the data to fit their needs.

1. Click the **File Parsers** tab.
